Filed : January 15, 2004 Page : 2 of 4

Amendments to the Claims:

Please amend claim 1 as follows. The claims and their status are shown below.

 (Currently Amended) An isolated polypeptide <u>having elongase 3-ketoacyl CoA</u> synthase (KCS) activity and comprising in the amino-terminal to carboxy-terminal direction:

- a first polypeptide segment, wherein said first polypeptide segment has membrane anchoring properties; joined to
- (b) a second polypeptide segment having a sequence selected from the group consisting of residues 75-114 of SEQ ID NO:12 and residues 75-114 of SEQ ID NO:14; joined to
- $\mbox{(c)} \qquad \mbox{a third polypeptide segment having at least } 40\% \mbox{ sequence identity to} \\ \mbox{residues } 115\mbox{-}506 \mbox{ of SEO ID NO:4.} \\$
- (Original) The polypeptide of claim 1, wherein said third polypeptide segment has at least 50% sequence identity to residues 115-506 of SEQ ID NO:4.
 - 3-7. (Canceled)
- (Original) The polypeptide of claim 1, wherein said polypeptide catalyzes the condensation of malonyl CoA and a C18 fatty acyl substrate, leading to the synthesis of a C20 fatty acyl CoA.
- (Original) The polypeptide of claim 8, wherein said C18 fatty acyl substrate is an oleov! substrate.
- (Original) The polypeptide of claim 1, wherein said polypeptide catalyzes the condensation of malonyl CoA and a C20 fatty acyl substrate, leading to the synthesis of a C22 fatty acyl CoA.
- (Original) The polypeptide of claim 10, wherein said C20 fatty acyl substrate is an eicosenoyl substrate.

12-25. (Canceled)
